SkinCart 💄

Selfie → skin analysis → routine → try-on → order

heavycastles · YouCam API Skin AI & eCommerce VTO Hackathon

A Telegram beauty-shop assistant on YouCam AI · mock-mode demos welcome

Problem

Small cosmetics shops in **Central Asia / CIS** sell through Telegram & Instagram DMs.

- "What should I buy for my skin?" answered **by hand** every day
- Customers **can't try** lipstick or foundation in a chat
- Guesswork → lost sales and wrong products

> Give a one-person shop the same scan → recommend → try on → buy flow as a big beauty brand.

What SkinCart does

1. Customer sends a **selfie** (Telegram bot or web)
2. **YouCam AI Skin Analysis** scores **12** concerns
3. Matcher builds a **routine** from the shop's catalog (always SPF)
4. **YouCam Makeup VTO** previews lipstick / foundation on their face
5. **Order** → LeadFlow lead (`skin_profile` + `basket`) → **n8n** owner alert + 14-day re-scan

```
selfie → File API → Skin Analysis → recommend → Makeup VTO → order → n8n
```

YouCam APIs used

Step	Endpoint
Upload	`POST /s2s/v2.0/file` → presigned PUT
Skin	`POST /s2s/v2.0/task/skin-analysis` → poll
VTO	`POST /s2s/v2.0/task/makeup-vto` → poll

Auth: `Authorization: Bearer $YOUCAM_API_KEY` · server `yce-api-01.makeupar.com`

Cache per image hash → re-scans & repeat try-ons cost **0 units**.

Mock mode (no key / `YOUCAM_MOCK=1`) → deterministic offline demos & CI.

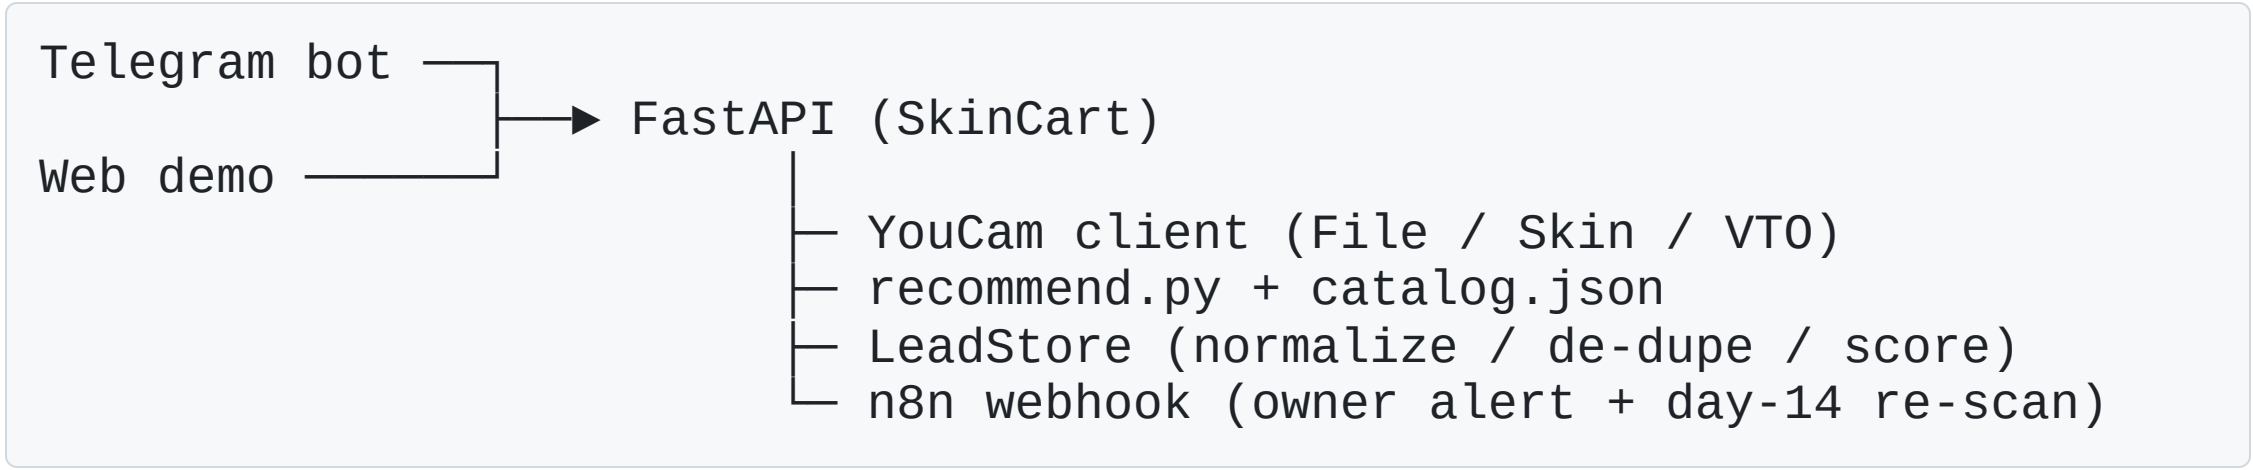

Demo (mock mode)

Synthetic illustrative face · **no real selfie** · badge `YouCam: mock`

- Top concerns e.g. puffy eyes / breakouts / dryness
- Routine: cleanser + eye gel + treatment + **SPF 50**
- Try-on: Velvet Matte Lipstick – Rose (mock SVG preview)
- Order → LeadFlow lead with `skin_profile` + `basket`

Screenshots + draft video: `docs/`

Architecture

Docker Compose: app `:8080` + n8n `:5678` · MIT · pytest green

Impact & what's next

Impact: every small beauty shop gets a beauty counter inside Telegram — scan, try, order, follow up.

Next:

1. Live selfie (consented) + public demo deploy
2. Multi-shop CSV catalog onboarding
3. Uzbek / Russian replies
4. Progress charts from re-scans
5. More VTO categories (eyeshadow, hair)

Built with: Python · FastAPI · YouCam AI · Telegram Bot API · n8n · Docker · pytest (12)
